

Amendments To The Abstract:

In the English translation document, please add the paragraph at page 29 line 1, as follows:

--ABSTRACT

A controller requests a gateway to release a call. The gateway then disconnects and communicates the disconnect to at least one additional network node along the end-to-end connection on the resource control level. In the case of a high level recovery of a controller a temporally close stop of charging of disconnected connections is effected without the controller signaling it.--
